## **BOS508**(REV22) **Phytochemical methods**

**Teaching hours – 10/unit**

**Course outcome:**

- Introduces them to various kinds of phytochemicals in plants
- Detailed methods of extraction and isolation will help them in higher studies
- A unit on evaluation of phytochemicals for various disorders also is useful in higher studies
- The chapter on herbal drugs helps to understand the significance of our traditional herbal practices
- Together, all these will help them to get jobs in pharmaceutical or such other companies or take up further studies in drug development

**Unit I**

Scope of phytochemistry, plants as source of chemical compounds, primary and secondary metabolites. Important source of carbohydrates, proteins, lipids, phenolics, flavonoids, pigments, alkaloids, volatile oils,terpenes, resins.

**Unit II**

**Extraction, isolation and purification of phytochemicals**

Selection of plant samples, processing and storage of samples for extraction.

Extraction methods- infusion, decoction, digestion, maceration, percolation, solvent extraction, fluid extraction, ultrasound, microwave assisted extraction, advantage and disadvange involved in each method.

Isolation of selected primary and secondary metabolites – amino acids, proteins and carbohydrate. Phenolics, flavonoids, alkaloids, lipids, oils, terpenes and saponins.

Purification techniques for primary and secondary metabolites – solvent-solvent fractionation and chromatography techniques

- HPTLC, silica gel column (normal and reverse), ion exchange, size exclusion

**Unit III**
**Characterisation and analysis of phytochemicals**

Preliminary, qualitative and quantitative techniques – paper chromatography, thin layer chromatography, Column Chromatography – HPLC, GC (qualitative and quantitative)

Colour reactions for amino acids, sugars, phenolics, flavonoids, alkaloids, terpenes, saponins, oils, lipids. Spectroscopic estimations/gravimetric determination of total sugars, amino acids, proteins, phenolics, flavonoids, alkaloids, terpenes, saponins, oils, lipids.

Characterisation using spectroscopic techniques - UV/VIS, FTIR, DSC (differential scanning calorimeter), NMR, MS, MALDI. XRD – single crystal and powder.

**Unit IV**
**Phytochemical evaluation**

Evaluation of phytochemicals for bioactive potential *in vivo* *in vitro*. Evaluation of phytochemcials for antimicrobial, antioxidant,antidiabetic, anti inflammatory, anti pyretic, diuresis, anti thyroid, anticancer, hepatoprotective activities and nutritional values. Toxicity study, route of administration, analysis. Ethical guidelines and clearance.

**Unit V**
**Standardisation and validation of phytochemicals**

Quality determination of herbal drugs. Role of processing methods and storage conditions on quality of drugs. Standardistation parameters- impurity limit, ash content, extractable matter, moisture content, other phytocemicals, microbial contaminants, pesticides.
Validation of drug – guidelines, limit of detection and quantification of impurities, organoleptic properties, physical, chemical, biological characteristics, stability testing, storage conditions and packing system/unit.

**Suggested Readings**

Bourne, U.K. Kokate, Purohit C.K. and Gokhale S.B. (1983), Pharmacognosy. Nivali Prakashan Publication

Braithwaite, A and Smith F J (1996) Chromatographic Methods (5th edition) Blackie Academic & Professional London
